

## **Research and Design Apprenticeship Guidelines**

School Research Support Committee recognizes the importance of knowledge gained from research and creative work both from the process as well as from the work themselves. Therefore, the committee has initiated Research and Design Apprenticeship Program to assist researchers, designers, and students in their efforts to conduct research and creative work. The guidelines for the program are as follows:

1. Disseminate information on the research or creative work that can include apprentices
2. Assess the skills of candidates by interviewing and review of design portfolio. One letter of recommendation from the student's advisor is required.
1. Remarks: Candidates with one time experience in the program are exempt from this requirement
2. Successful candidates obtain permission from parents/guardians.
3. A certificate is given to apprentices who complete the project.
